

Aarav Kapoor

Data Engineer | Data pipelines & analytics

Software / data professional with 4.6 years of experience building data pipelines, backend systems, and infrastructure. Most of my work has been data pipelines and analytics infrastructure; I've shipped a couple small ML features but it's not the core of my day. My toolkit is solid on the data engineering side — Python, Spark, Airflow, warehouse design — and I've completed a couple of self-directed ML projects (Kaggle competitions, side projects fine-tuning small models). Interested in transitioning toward more AI/ML-focused work, ideally at a company where I can leverage my existing data-infra skills while learning modern ML practices.

Experience:

Data Engineer at Ola

2021-11-19 to None

Mixed data science and analytics-engineering role at a marketing-analytics startup. Spent maybe 30% of my time on lightweight ML (clustering, classification, churn prediction in sklearn/XGBoost) and 70% on data infrastructure and dashboards. Comfortable with the modeling work but I wouldn't call myself an ML specialist. Built our experimentation framework that supports the product team's A/B tests.

Skills:

GCP, Spring Boot, Kubeflow, Java, GANs, Figma, Elasticsearch, OpenCV, CNN, Azure, Prompt Engineering, Object Detection, MLOps, Python, BM25, Weights & Biases, Sales
