

Vikram Verma

Full Stack Developer | Backend systems & APIs

Software engineer with 4.3 years of experience across web, backend, and cloud systems. Strong fundamentals in software development and system design. My background is full-stack, but my comfort zone is the backend and the database. I've been keeping up with AI/ML at a self-learner level — taken some online courses, played with the OpenAI and Anthropic APIs, built a small RAG side project — but I haven't done it in a professional capacity yet. Open to roles where I can either deepen my software engineering work or, if the team is open, start contributing to ML-adjacent systems.

Experience:

Full Stack Developer at Globex Inc

2023-09-10 to None

Full-stack web application development at a SaaS company. Built React-based admin interfaces and the REST API backing them. Worked across the stack: frontend components, REST endpoint design, PostgreSQL schema, deployment via Docker/Kubernetes. Comfortable in most parts of a typical web stack though my comfort zone is the backend and database side. Recent learning has been on the testing and CI/CD discipline.

Software Engineer at Wipro

2022-03-19 to 2023-09-10

Frontend engineering at a media company. React, TypeScript, and the typical surrounding tooling (Webpack, Jest, Cypress). Built the company's design system from scratch and led the migration from a legacy Angular app. Strong on the frontend craft — accessibility, performance, animations — but limited backend exposure.

Skills:

Snowflake, BigQuery, Recommendation Systems, Data Pipelines, Docker, MongoDB, PostgreSQL, Sales, Kafka, Speech Recognition, BentoML, Go, Next.js, dbt
