

Kavya Nair

Software Engineer | Cloud & DevOps

Software engineer with 3.7 years of experience across web, backend, and cloud systems. Strong fundamentals in software development and system design. Most of my work is conventional backend engineering — APIs, databases, queues, deployments. I've been keeping up with AI/ML at a self-learner level — taken some online courses, played with the OpenAI and Anthropic APIs, built a small RAG side project — but I haven't done it in professional capacity yet. Open to roles where I can either deepen my software engineering work or, if the door is open to it, start contributing to ML-adjacent systems.

Experience:

Software Engineer at Acme Corp

2025-04-02 to None

Test automation and QA engineering for a fintech product. Built and maintained the end-to-end test suite using Selenium and pytest, plus the load-testing setup using Locust. Worked closely with developers on testing patterns and with product on acceptance criteria. Recent work has been on shifting test responsibility into the dev team — moving from QA-as-gate to QA-as-coach. Career has been entirely in QA/test engineering.

Frontend Engineer at Flipkart

2022-10-15 to 2025-04-02

Android mobile development using Java and (more recently) Kotlin at a consumer-app company. Built and maintained multiple production features including the main shopping flow, push notification system, and the offline-first sync layer. Comfortable with the Android framework, Jetpack components, and the typical patterns (MVVM, Hilt, Coroutines). My career has been entirely on mobile so far; interested in expanding into broader backend or platform engineering.

Skills:

BigQuery, Marketing, Node.js, Django, Salesforce CRM, MongoDB, ETL, Redis, Illustrator, Rust
