

Avni Pandey

DevOps Engineer | Cloud & DevOps

Software engineer with 3.9 years of experience across web, backend, and cloud systems. Strong fundamentals in software development and system design. I've worked across web frontends, REST APIs, and cloud deployments; comfortable in most parts of a typical SaaS stack. I've been keeping up with AI/ML at a self-learning level — taken some online courses, played with the OpenAI and Anthropic APIs, built a small RAG side project — but I haven't done it in a professional capacity yet. Open to roles where I can either deepen my software engineering work or, if the team is open to it, start contributing to ML-adjacent systems.

Experience:

DevOps Engineer at Infosys

2023-06-12 to None

Java backend development at a large enterprise — Spring Boot microservices, Kafka for inter-service messaging, Postgres + Redis for storage. Worked on the customer onboarding flow which involved orchestrating multiple downstream services. Solid on the Spring ecosystem, transaction handling, and the operational side of Java services. Looking to either go deeper on distributed systems or expand into modern application stacks.

DevOps Engineer at Wipro

2022-08-02 to 2023-05-29

Full-stack web application development at a SaaS company. Built React-based admin interfaces and the REST API backing them. Worked across the stack: frontend components, REST endpoint design, Postgres schema, deployment via Docker/Kubernetes. Comfortable in most parts of a typical web stack though my comfort zone is the backend and database side. Recent learning has been on the testing and CI/CD discipline.

Skills:

Docker, YOLO, PEFT, Webpack, Data Science, AWS, Java, Angular, Databricks, ETL, Marketing, Information Retrieval, Weights & Biases, Terraform, SAP, Illustrator
