

Vihaan Naidu

Frontend Engineer | Backend systems & APIs

Software engineer with 5.7 years of experience across web, backend, and cloud systems. Strong fundamentals in software development and system design. I've spent most of my career on web and API development — Python/Django and Node.js mostly. I've been keeping up with AI/ML at a self-learner level — taken some courses, played with the OpenAI and Anthropic APIs, built a small RAG side project — but I haven't done it professionally yet. Open to roles where I can either deepen my software engineering work or, if the door is open to it, start contributing to ML-adjacent systems.

Experience:

Frontend Engineer at Tech Mahindra

2022-04-18 to None

Java backend development at a large enterprise — Spring Boot microservices, Kafka for inter-service messaging, Postgres + Redis for storage. Worked on the customer onboarding flow which involved orchestrating multiple downstream services. Solid on the Spring ecosystem, transaction handling, and the operational side of Java services. Looking to either go deeper on distributed systems or expand into modern application stacks.

DevOps Engineer at Hooli

2020-10-25 to 2022-04-18

Frontend engineering at a media company. React, TypeScript, and the typical surrounding tooling (Webpack, Jest, Cypress). Built the company's design system from scratch and led the migration from a legacy Angular app. Strong on the frontend craft — accessibility, performance, animations — but limited backend exposure.

Skills:

Hadoop, JavaScript, Databricks, Python, dbt, CI/CD
